

Are you or someone you care for suffering from an open wound that is **not healing**?

According to the National Institute of Health, **non-healing wounds are the number one cause of amputation**. Your provider is now offering advanced wound care treatment covered by Medicare.

Case studies from actual patients

Open wound for one year.

Before

Before

Healed with two weekly treatments

After

After

Those at highest risk for open wounds that will not heal

- **Diabetes** - Many patients don't even realize they *have* a wound
- **Peripheral Vascular Disease** - Due to poor circulation
- **Patients referred to wound care** - Poor compliance and attendance

If you suffer from any of these diseases, ask your doctor to CHECK FOR WOUNDS!
